Contents

0	Introduction	12
0.1	Prerequisites	13
0.2	Overview	14
0.3	Literature	15
0.4	References and Footnotes	16
0.5	Exercises	17
A:	Physics in a Gravitational Field and General Covariance	18
1	From the Einstein Equivalence Principle to Geodesics	19
1.1	Motivation: The Einstein Equivalence Principle	19
1.2	Lorentz-Covariant Formulation of Special Relativity (Review)	28
1.3	Accelerated Observers and the Rindler Metric	34
1.4	General Coordinate Transformations in Minkowski Space	39
1.5	Metrics I: Definition and Examples	44
1.6	Metrics II: Lorentzian (Pseudo-Riemannian) Metrics	48
1.7	Geodesic Equation from the Extremisation of Proper Time	51
1.8	Christoffel Symbols and Coordinate Transformations	54
1.9	Apology and Outlook	57
2	Physics and Geometry of Geodesics	58
2.1	Action Principles and Lagrangians for Geodesics	58
2.2	Affine and Non-affine Parametrisations	62
2.3	Example: Geodesics in \mathbb{R}^2 in Polar Coordinates	64
2.4	Example: Geodesics for Ultrastatic and Direct Product Metrics	67
2.5	Consequences and Uses of the Euler-Lagrange Equations	68
2.6	Conserved Charges and (a first encounter with) Killing Vectors	72
2.7	Newtonian Limit of the Geodesic Equation	74
2.8	Rindler Coordinates Revisited	79
2.9	Gravitational Redshift	83
2.10	Locally Inertial and Riemann Normal Coordinates	89
3	Tensor Algebra	98
3.1	Principle of General Covariance	98
3.2	Tensors	100
3.3	Tensor Algebra	104
3.4	Generally Covariant Integration and Volume Elements	108
3.5	Tensor Densities and Volume Elements	110
3.6	Towards a Coordinate-Independent Interpretation of Tensors	113
3.7	Multilinear Algebra and Tensors	114
3.8	Vielbeins and Orthonormal Frames	119
3.9	Epilogue: Indices? Indices!	125
4	Tensor Analysis (Generally Covariant Differentiation)	130
4.1	Covariant Derivative for Vector Fields	130

4.2	Extension of the Covariant Derivative to Other Tensor Fields	133
4.3	Main Properties of the Covariant Derivative	135
4.4	Uniqueness of the Levi-Civita Connection (Christoffel symbols)	137
4.5	Tensor Analysis: Some Special Cases	138
4.6	Appendix: A Formula for the Variation of the Determinant	143
4.7	Covariant Differentiation Along a Curve	145
4.8	Parallel Transport and Geodesics	146
4.9	Example: Parallel Transport on the 2-Sphere	147
4.10	Fermi-Walker Parallel Transport	150
4.11	Epilogue: Manifolds? Think Globally, Act Locally!	153
5	Physics in a Gravitational Field and Minimal Coupling	157
5.1	Principle (or Algorithm) of Minimal Coupling	157
5.2	Particle Mechanics in a Gravitational Field Revisited	158
5.3	Klein-Gordon Scalar Field in a Gravitational Field	159
5.4	Interlude: General Covariance in Minkowski Space?	160
5.5	Lorentz-Covariant Formulation of Maxwell Theory (Review)	162
5.6	Maxwell Theory in a Gravitational Field	164
5.7	Minimal Coupling and (quasi-)Topological Couplings	168
5.8	Conserved Charges from Covariantly Conserved Currents	170
6	Energy-Momentum Tensor I: Basics	172
6.1	Introduction	172
6.2	Perfect Fluid Energy-Momentum Tensor in Special Relativity	172
6.3	Noether Energy-Momentum Tensor in Special Relativity (Review)	175
6.4	Synopsis of the Belinfante Improvement Procedure (Review)	179
6.5	Energy-Momentum Tensor from Minimal Coupling?	181
6.6	Covariant Energy-Momentum Tensor: the Source of Gravity	185
6.7	On the Energy-Momentum Tensor for Weyl-invariant Actions	189
6.8	Klein-Gordon Scalar Field in (1+1) Minkowski and Rindler Space	191
6.9	Conserved Currents from the Energy-Momentum Tensor?	194
7	Curvature I: The Riemann Curvature Tensor	197
7.1	Curvature: Preliminary Remarks	197
7.2	Riemann Tensor from the Commutator of Covariant Derivatives	198
7.3	Symmetries and Algebraic Properties of the Riemann Tensor	200
7.4	Influence of Curvature on Particle Trajectories	204
7.5	Contractions of the Riemann Tensor: Ricci Tensor and Ricci Scalar	205
7.6	Example: Curvature Tensor of the 2-Sphere	209
7.7	More Examples: Curvature Tensor and Polar/Spherical Coordinates	210
7.8	Bianchi Identities and the Einstein Tensor	213
7.9	Riemann Normal Coordinates Revisited	215
7.10	Principle of Minimal Coupling Revisited	217
B:	General Relativity and Geometry	219
8	Lie Derivative, Symmetries and Killing Vectors	220

8.1	Symmetries of a Metric (Isometries): Preliminary Remarks	220
8.2	Lie Derivative for Scalars	221
8.3	Lie Derivative for Vector Fields	222
8.4	Lie Derivative for other Tensor Fields	225
8.5	Lie Derivative of the Metric and Killing Vectors	227
8.6	Lie Derivative for Tensor Densities	231
9	Killing Vectors, Symmetries and Conserved Charges	233
9.1	Killing Vectors and Conserved Charges	233
9.2	Conformal Killing Vectors and Conserved Charges	234
9.3	Conformal Group and Conformal Algebra of Minkowski Space	235
9.4	Homotheties and Conserved Charges	238
9.5	Conserved Charges from Killing Tensors and Killing-Yano Tensors	240
10	Curvature II: Geometry and Curvature	243
10.1	Intrinsic Geometry, Curvature and Parallel Transport	243
10.2	Vanishing Riemann Tensor and Existence of Flat Coordinates	247
10.3	Curvature of Surfaces: Euler, Gauss(-Bonnet) and Liouville	249
10.4	The Weyl Tensor and its Uses	255
10.5	Generalisations: Torsion and Non-Metricity	259
11	Curvature III: Curvature and Geodesic Congruences	264
11.1	Covariant Derivation of the Geodesic Deviation Equation	264
11.2	Raychaudhuri Equation for Timelike Geodesic Congruences	266
11.3	Transverse Null Geodesic Deviation Equation	272
11.4	Raychaudhuri Equation for Affine Null Geodesic Congruences	277
11.5	Raychaudhuri Equation for Non-affinely Parametrised Null Geodesics	281
11.6	Expansions and Inaffinities of Radial Null Congruences	283
12	Curvature IV: Curvature and Killing Vectors	286
12.1	Useful Identities Relating Curvature and Killing Vectors	286
12.2	Killing Vectors form a Lie algebra	288
12.3	On the Isometry Algebra of a Compact Riemannian Space	289
12.4	Invariance of the Curvature along Killing Directions	290
12.5	Calculating Killing Components of the Ricci Tensor	291
12.6	Killing Vectors as Solutions to the Maxwell Equations	292
12.7	Killing Vectors and Komar Currents	293
13	Curvature V: Maximal Symmetry and Constant Curvature	295
13.1	Homogeneous, Isotropic and Maximally Symmetric Spaces	295
13.2	Curvature Tensor of a Maximally Symmetric Space	298
13.3	Maximally Symmetric Metrics I: Solving the Constant Curvature Conditions	299
13.4	Maximally Symmetric Metrics II: Embeddings	302
14	Hypersurfaces I: Basics	304
14.1	Basic Definitions: Embeddings and Embedded Hypersurfaces	304
14.2	Embeddings: Tangent and Normal Vectors and the Induced Metric	308

14.3	Embeddings and Pull-Backs	312
14.4	Embedded Hypersurfaces and Normal Vectors	315
14.5	Hypersurface Orthogonality and Frobenius Integrability	317
15	Hypersurfaces II: Intrinsic Geometry of non-Null Hypersurfaces	320
15.1	Projectors for non-Null Hypersurfaces and the Induced Metric	320
15.2	Intrinsic = Projected Covariant Differentiation	323
15.3	Integration on non-Null Hypersurfaces and the Gauss Theorem	324
15.4	Spacelike Hypersurfaces and Stationary vs Static Metrics	326
16	Hypersurfaces III: Intrinsic Geometry of Null Hypersurfaces	333
16.1	Null Hypersurfaces	333
16.2	Null Hypersurfaces and their Null Geodesic Generators	335
16.3	Adapted Coordinates and Induced Metric for Null Hypersurfaces	339
16.4	Projectors for Null Hypersurfaces	340
17	Hypersurfaces IV: Extrinsic Geometry of non-Null Hypersurfaces	343
17.1	Introduction: Intrinsic vs Extrinsic Geometry	343
17.2	Extrinsic Curvature Tensor	346
17.3	Extrinsic Curvature and the Normal Components of the Connection	350
17.4	Gauss-Codazzi Equations	351
C:	Dynamics of the Gravitational Field	355
18	The Einstein Equations	356
18.1	Heuristics	356
18.2	More Systematic Approach	357
18.3	Newtonian Weak-Field Limit	359
18.4	Einstein Equations	360
18.5	Cosmological Constant	363
18.6	Weyl Tensor and the Propagation of Gravity	365
18.7	General Covariance and Significance of the Bianchi Identities	366
19	Einstein Equations from an Action Principle	369
19.1	Einstein-Hilbert Action	369
19.2	Appendix: A Formula for the Variation of the Ricci Tensor	371
19.3	Matter Action and the Covariant Energy-Momentum Tensor	374
19.4	Einstein Action	375
19.5	Gibbons-Hawking-York Boundary Term	378
19.6	General Covariance and Noether Identities	382
19.7	First Order Form of the Action, Torsion and the Palatini Principle	388
20	Hamiltonian Formulation of General Relativity	394
20.1	General Covariance and Constraints	395
20.2	Gauss-Codazzi Action and the Gibbons-Hawking-York Boundary Term	396
20.3	ADM Decomposition of the Metric (ADM Variables)	398
20.4	ADM Action and the DeWitt Metric	401
20.5	Synopsis of the Canonical Formulation of Maxwell Theory	402

20.6	Back to Gravity: Conjugate Momenta and Primary Constraints	405
20.7	Legendre Transform and ADM Hamiltonian	407
20.8	Secondary Constraints: the Hamiltonian and Momentum Constraints	409
20.9	Properties and Significance of the Constraints	411
20.10	Boundary Terms in the ADM Action and Hamiltonian	416
20.11	Alternative Derivation of the Hamiltonian Boundary Terms	419
20.12	Significance of the Hamiltonian Boundary Terms: ADM Energy	421
21	Energy-Momentum Tensor II: Selected Topics	426
21.1	Energy Conditions	426
21.2	Canonical vs Covariant Energy-Momentum Tensor	434
21.3	Energy-Momentum Tensor of a Conformally Coupled Scalar Field	439
21.4	Remarks on Dilatations and the Callan-Coleman-Jackiw Tensor	445
21.5	Energy-Momentum Tensor and (quasi-)Topological Couplings	453
21.6	Comments on Gravitational Energy	457
22	Linearised Gravity and Gravitational Waves	464
22.1	Preliminary Remarks	464
22.2	Linearised Einstein Equations	464
22.3	Newtonian Limit Revisited	467
22.4	ADM and Komar Energies of an Isolated System	468
22.5	Wave Equations and Gauge Conditions in Maxwell Theory	471
22.6	Linearised Gravity: Gauge Invariance and Coordinate Choices	473
22.7	Wave Equation	474
22.8	Polarisation Tensor and the Metric of a Gravitational Wave	475
22.9	Physical Effects of Gravitational Waves	478
22.10	Brief Comments on Production and Energy of Gravitational Waves	480
22.11	Even Briefer Comments on Detection of Gravitational Waves	483
D:	General Relativity and the Solar System	485
23	Einstein Equations and Spherical Symmetry	486
23.1	Introduction	486
23.2	Static Spherically Symmetric Metrics	486
23.3	Solving the Einstein Equations: the Schwarzschild Metric	490
23.4	Schwarzschild Coordinates and Schwarzschild Radius	493
23.5	Measuring Length and Time in the Schwarzschild Metric	495
23.6	Einstein Equations for Spherical Symmetry and Birkhoff's Theorem	497
23.7	Interior Solution for a Static Star and the TOV Equation	503
23.8	ADM and Komar Energies of the Schwarzschild Solution	509
24	Particle and Photon Orbits in the Schwarzschild Geometry	514
24.1	Symmetries and the Effective Potential for Geodesics	514
24.2	Equation for the Shape of the Orbit	519
24.3	Timelike Geodesics	521
24.4	Anomalous Precession of the Perihelia of the Planetary Orbits	524
24.5	Null Geodesics	527

24.6	Bending of Light by a Star: 3 Derivations	529
24.7	A Unified Description in terms of the Runge-Lenz Vector	535
E: Black Holes		539
25	Black Holes I: Approaching the Schwarzschild Radius r_s	540
25.1	Static Observers	541
25.2	Vertical Free Fall	542
25.3	Vertical Free Fall as seen by a Distant Observer	544
25.4	Infinite Gravitational Redshift	545
25.5	Geometry near r_s and Minkowski Space in Rindler Coordinates	547
25.6	Lightcones and Tortoise Coordinates	550
25.7	Klein-Gordon Scalar Field in the Schwarzschild Geometry	552
26	Black Holes II: the Schwarzschild Black Hole	556
26.1	Preliminary Remarks	556
26.2	Crossing r_s with Painlevé-Gullstrand Coordinates	557
26.3	Lemaître and Novikov Coordinates	563
26.4	Eddington-Finkelstein Coordinates, Black Holes and Event Horizons	569
26.5	Eddington Time Coordinate and Kerr-Schild Form of the Metric	577
26.6	Kruskal-Szekeres Coordinates	579
26.7	Maximal Extension of Schwarzschild: the Kruskal Diagram	583
26.8	Properties of the Asymptotically Timelike Killing Vector	587
26.9	First Encounter with Killing Horizons and Surface Gravity	589
26.10	From Eddington-Finkelstein to Israel(-Klösch-Strobl) Coordinates	592
26.11	Appendix: Summary of Schwarzschild Coordinate Systems	597
27	Interlude: Carter-Penrose Conformal Diagrams	598
27.1	Introduction	598
27.2	Causal Structure and Conformal Rescalings of the Metric	599
27.3	Penrose Diagram for (3+1) Minkowski Space	601
27.4	Penrose Diagram for (1+1) Minkowski Space and Rindler Observers	607
27.5	Penrose Diagram for Schwarzschild (Kruskal-Szekeres)	608
27.6	Penrose Diagrams: List of Other Examples	612
28	Black Holes III: Simple Models of Gravitational Collapse	614
28.1	Collapse of a Shell of Radiation	614
28.2	Some Comments on Null Shells and Adapted Coordinates	618
28.3	Qualitative Aspects of the Gravitational Collapse of a Star	620
28.4	Oppenheimer-Snyder Set-Up: Geometry and Matter Content	626
28.5	$k = 0$ Collapse and Painlevé-Gullstrand Coordinates	629
28.6	Synopsis of the Oppenheimer-Snyder Construction	632
28.7	Continuity of the Normal Derivatives of the Metric	633
28.8	$k = 1$ Collapse and Comoving Coordinates	636
29	Black Holes IV: Other Black Hole Solutions (a brief overview)	639
29.1	Kerr-Newman Family of 4-dimensional Black Holes	639

29.2	Other 4-dimensional Solutions	642
29.3	Higher-dimensional Solutions	645
30	Black Holes V: the Reissner-Nordstrøm Solution	648
30.1	Derivation of the Reissner-Nordstrøm Metric	648
30.2	Basic Properties of the Naked Singularity Solution with $m^2 - q^2 < 0$	651
30.3	Basic Properties of the Extremal Solution with $m^2 - q^2 = 0$	652
30.4	Basic Properties of the Non-extremal Solution with $m^2 - q^2 > 0$	655
30.5	Motion of a Charged Particle: the Effective Potential	659
30.6	Eddington-Finkelstein Coordinates: General Considerations	665
30.7	Eddington-Finkelstein Coordinates: the Reissner-Nordstrøm Metric	666
30.8	Kruskal-Szekeres Coordinates: General Considerations	669
30.9	Kruskal-Szekeres Coordinates: the Reissner-Nordstrøm Metric	671
31	Black Holes VI: Horizons	674
31.1	Introduction	674
31.2	The many Facets of the Schwarzschild Radius	675
31.3	Kerr Metric: Ergosphere vs Killing Horizon and Event Horizon	679
31.4	Event Horizon	685
31.5	Killing Horizons as Event Horizons of Stationary Black Holes	688
31.6	Killing Horizons and Surface Gravity	691
31.7	Killing Horizons, Event Horizons and their Null Congruences	695
31.8	Vaidya Metrics: (Marginally) Trapped Surfaces	698
31.9	Vaidya (and beyond): Marginally Trapped Tubes and Horizons	704
31.10	Vaidya Metrics: Apparent Horizon vs Event Horizon	708
31.11	Example: Horizons in the Collapsing Thin Light Shell Geometry	710
31.12	Example: Horizons in Oppenheimer-Snyder Collapse	712
31.13	Concluding Comments: Trapped Regions vs Event Horizons	716
F:	Cosmology	720
32	Cosmology I: Basics	721
32.1	Preliminary Remarks	721
32.2	Fundamental Assumption: The Cosmological Principle	722
32.3	Fundamental Observations I: Olbers' Paradox	723
32.4	Fundamental Observations II: The Hubble(-Lemaître) Expansion	724
33	Cosmology II: Geometry and Physics of Robertson-Walker Metrics	727
33.1	Mathematical Model: the Robertson-Walker Metric	727
33.2	Timelike Geodesics and Comoving Observers	728
33.3	Velocity - Distance Relation, Recessional Velocities and the Hubble Sphere	731
33.4	Painlevé-Gullstrand-like Coordinates for Comoving Observers	734
33.5	Conformal Time η and Conformal Flatness of Robertson-Walker Metrics	735
33.6	Area Measurements and Number Counts	737
33.7	Cosmological Redshift	739
33.8	Redshift - Distance Relation (Hubble's Law)	743
33.9	Klein-Gordon Scalar Field in a Cosmological Background	746

33.10	Comments on Cosmic Expansion as “Expansion of Space”	749
34	Cosmology III:Friedmann-Lemaître-Robertson-Walker Cosmology	753
34.1	Curvature and Einstein Tensor of the Robertson-Walker Metric	753
34.2	Matter Content: A Perfect Fluid	756
34.3	Conservation Laws and Comoving Congruences	763
34.4	Conservation Laws for Specific Equations of State	766
34.5	Einstein and Friedmann-Lemaître Equations	768
34.6	Lagrangian Formulation of the Friedmann Equations	771
34.7	Hamiltonian Formulation of the Friedmann Equations	777
35	Cosmology IV: Qualitative Analysis	780
35.1	Big Bang (Existence of an Initial Singularity)	780
35.2	Age of the Universe	781
35.3	Long Term Behaviour	781
35.4	Density Parameters and the Critical Density	784
35.5	Different Eras of the Cosmological Expansion	785
35.6	Causal Structure and Penrose Diagrams for $k = 0$	788
35.7	Lightrays and Cosmological Particle and Event Horizons	790
35.8	Lightrays and the Hubble Sphere	795
35.9	Hubble “Horizon”: Is our Universe (like) a Black Hole?	798
36	Cosmology V: Some Exact Solutions	804
36.1	Milne Universe	804
36.2	Einstein Static Universe	807
36.3	Matter Dominated Era	808
36.4	Radiation Dominated Era	811
36.5	Cosmological Constant Dominated Era: (Anti-) de Sitter Space	813
37	Cosmology VI: The Universe Today - Insights and Puzzles	817
37.1	Λ -CDM Cold Dark Matter + Dark Energy Model	817
37.2	Exact Λ -CDM Solution	819
37.3	Flatness and Horizon Problems	820
37.4	Aspects of the Cosmological Constant Problem(s)	825
G:	Varia	834
38	de Sitter and anti-de Sitter Space	835
38.1	Embeddings, Isometries and Coset Space Structure	835
38.2	Some Coordinate Systems for de Sitter space	838
38.2.1	Global Coordinates	839
38.2.2	Conformal Time, Penrose Diagrams and Horizons	839
38.2.3	Hyperbolic Slicing Coordinates	841
38.2.4	de Sitter Slicing Coordinates	842
38.2.5	Planar Coordinates	843
38.2.6	Static Coordinates	844
38.2.7	Eddington-Finkelstein and Kruskal-Szekeres Coordinates	845

38.2.8	Interlude on (A)dS Schwarzschild	847
38.2.9	Painlevé-Gullstrand-like Coordinates	848
38.3	Some Coordinate Systems for anti-de Sitter space	849
38.3.1	Global (and Static) Coordinates	850
38.3.2	Conformal Coordinates, Conformal Boundary and Penrose Diagrams	851
38.3.3	Isotropic (Spatially Conformally Flat) Coordinates	854
38.3.4	Cosmological (Hyperbolic Slicing) Coordinates	855
38.3.5	de Sitter Slicing Coordinates	855
38.3.6	anti-de Sitter Slicing Coordinates	856
38.3.7	Poincaré Coordinates	856
38.3.8	Plane Wave AdS Coordinates	859
38.3.9	Codimension-2 Hyperbolic Slicing Coordinates	861
38.3.10	Painlevé-Gullstrand-like Coordinates?	862
38.4	Warped Products, Cones, and Maximal Symmetry	864
39	Vaidya Metrics I: Bondi Gauge and Radiation Fields	870
39.1	Introduction: Ingoing and Outgoing Vaidya Metrics	870
39.2	Interpretation(s) of the Vaidya Mass Functions $m(v)$ and $m(u)$	873
39.3	Einstein Equations in the Bondi Gauge (Radiative Coordinates)	875
39.4	Description of In- and Outgoing Pure Radiation Fields	878
39.5	Vaidya Metrics in the Schwarzschild Gauge	881
40	Vaidya Metrics II: Radial Null and Timelike Geodesics	885
40.1	Radial Null Geodesics for Ingoing Vaidya	885
40.2	Radial Null Geodesics for Outgoing Vaidya	888
40.3	Gravitational Redshift for Outgoing Vaidya	889
40.4	Radial Timelike Geodesics for Outgoing Vaidya	891
40.5	Future Incompleteness of Outgoing Eddington-Finkelstein Coordinates	893
40.6	Infinite Gravitational Redshift and Future Incompleteness	894
40.7	Some Comments on Future Extensions of Outgoing Vaidya	896
41	Vaidya Metrics III: Linear Mass $m(v) = \mu v$ (a case study)	899
41.1	Outgoing Lightrays for $m(v) = \mu v$: Derivation 1	899
41.2	Some Comments on Homotheties, Geodesics and Wronskians	903
41.3	Event vs Apparent Horizons for $m(v) = \mu v$: Overview	905
41.4	Null Geodesics, Horizons and Singularities for $\mu = 1/16$	909
41.5	Linear $\mu = 1/16$ mass Vaidya glued to Schwarzschild	911
41.6	Appendix: Outgoing Lightrays for $m(v) = \mu v$: Derivation 2	914
42	Exact Wave-like Solutions of the Einstein Equations	918
42.1	Plane Waves in Rosen Coordinates: Heuristics	918
42.2	From pp-waves to plane waves in Brinkmann coordinates	919
42.3	Geodesics, Light-Cone Gauge and Harmonic Oscillators	921
42.4	Curvature and Singularities of Plane Waves	923
42.5	From Rosen to Brinkmann coordinates (and back)	926
42.6	More on Rosen Coordinates	928
42.7	Heisenberg Isometry Algebra of a Generic Plane Wave	929

42.8	Plane Waves with more Isometries	931
43	Kaluza-Klein Theory	934
43.1	Motivation: Gravity and Gauge Theory	934
43.2	The Kaluza-Klein Miracle: History and Overview	936
43.3	Origin of Gauge Invariance	939
43.4	Motion of Charged Particles in 4 Dimensions from 5-Dimensional Geodesics	941
43.5	First Problems: The Equations of Motion	942
43.6	Masses and Charges from Scalar Fields in 5 Dimensions	943
43.7	Kinematics of Dimensional Reduction	945
43.8	Kaluza-Klein Ansatz Revisited	946
43.9	Non-Abelian Generalisation and Outlook	948
